

**VERTICAL DEFLECTION OUTPUT CIRCUIT**

- POWER AMPLIFIER
- FLYBACK GENERATOR
- THERMAL PROTECTION

**DESCRIPTION**

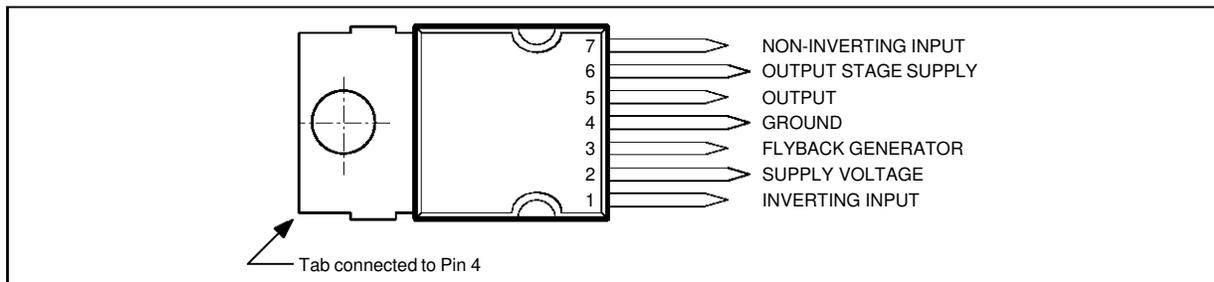

The TDA9302H is a monolithic integrated circuit in HEPTAWATT™ package. It is a high efficiency power booster for direct driving of vertical windings of TV yokes. It is intended for use in Color and B & W television as well as in monitors and displays.

**MOUNTING INSTRUCTIONS**

The power dissipated in the circuit must be removed by adding an external heatsink. Thanks to the HEPTAWATT™ package attaching the heatsink is very simple, a screw or a compression spring (clip) being sufficient.

Between the heatsink and the package it is better to insert a layer of silicon grease, to optimize the thermal contact ; no electrical isolation is needed between the two surfaces, since the tab is connected to Pin 4 which is ground.
